Stochastic differential equations for Lie group valued moment maps

Daria Smirnova

University of Geneva

Host: Mikhail Lemeshko

The classical work of Pitman in probability theory establishes a surprising link between the Brownian motion in dimensions one and three. This relation was interpreted by Biane-Bougerol-O'Connell in terms of the Duistermaat-Heckman measure from symplectic geometry. We generalize these constructions for the case of Brownian motion on curved three dimensional spaces: the 3-sphere and the hyperbolic space. The case of the hyperbolic space is intimately related to the quantum group $U_q(\mathfrak{sl}(2))$. Our method is a combination of analytic results and numerical experiments which allowed to rule out some of the scenarios.

Friday, November 22, 2019 02:00pm - 03:00pm

Heinzel Seminar Room / Office Bldg West (I21.EG.101)

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
