

## Seminar/Talk

# GeomTop Seminar: short talk "On the Treewidth of Triangulated 3-Manifolds"

**Kristof Huszar**

IST Austria

Host: Herbert Edelsbrunner

On the Treewidth of Triangulated 3-Manifolds (Kristof Huszar, Jonathan Spreer and Uli Wagner) In graph theory, as well as in 3-manifold topology, there exist several width-type parameters to describe how "simple" or "thin" a given graph or 3-manifold is. These parameters, such as pathwidth or treewidth for graphs, or the concept of thin position for 3-manifolds, play an important role when studying algorithmic problems; in particular, there is a variety of problems in computational 3-manifold topology - some of them known to be computationally hard in general - that become solvable in polynomial time as soon as the dual graph of the input triangulation has bounded treewidth. In view of these algorithmic results, it is natural to ask whether every 3-manifold admits a triangulation of bounded treewidth. We show that this is not the case, i.e., that there exists an infinite family of closed 3-manifolds not admitting triangulations of bounded pathwidth or treewidth. We derive these results from work of Agol and of Scharlemann and Thompson, by exhibiting explicit connections between the topology of a 3-manifold  $M$  on the one hand and width-type parameters of the dual graphs of triangulations of  $M$  on the other hand, answering a question that had been raised repeatedly by researchers in computational 3-manifold topology. In particular, we show that if a closed, orientable, irreducible, non-Haken 3-manifold  $M$  has a triangulation of treewidth (resp. pathwidth)  $k$  then the Heegaard genus of  $M$  is at most  $48(k+1)$  (resp.  $4(3k+1)$ ).

**Wednesday, May 30, 2018 01:00pm - 01:30pm**

Mondi Seminar Room 3, Central Building

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station. Please find a schedule of the ISTA Shuttle on our webpage: <https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
