

Seminar/Talk

Rational points over C_1 fields.

Marta Pieropan

École polytechnique fédérale de Lausanne

Host: Timothy Browning

In the 1950s Lang studied the properties of C_1 fields, that is, fields over which every homogeneous polynomial of degree at most n in $n+1$ variables has a nontrivial solution. Around 2000 he conjectured that smooth proper rationally connected varieties over C_1 fields have rational points. I will introduce the conjecture and show how to find points on complete intersections of forms of products of projective spaces over C_1 fields of characteristic 0.

Thursday, November 22, 2018 01:30pm - 03:30pm

Big Seminar room Ground floor / Office Bldg West (I21.EG.101)

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
