Semi-classical limit of large fermionic systems at positive temperature

Arnaud Triay

(Universite Paris-Dauphine)

Host: Robert Seiringer

We study a system of N interacting fermions at positive temperature in a confining potential. In the regime where the intensity of the interaction scales as $1/N$ and with an effective semi-classical parameter $\hbar = N^{-1/d}$ where d is the space dimension, we prove the convergence to the corresponding Thomas-Fermi model at positive temperature. In the derivation of the latter arises the fermionic entropy $s(x) = x \log x + (1-x) \log(1-x)$. We also treat the dilute case, when the two body interaction potential is scaled like $N^{d \cdot \eta} w(N^{\eta} x)$. (Joint work with M. Lewin and P. Madsen)

Thursday, March 21, 2019 04:00pm - 06:00pm

Big Seminar room Ground floor / Office Bldg West (I21.EG.101)

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
