

Seminar/Talk

Derived equivalences of hyperkähler varieties

Lenny Taelman

Universiteit van Amsterdam

Host: Tamas Hausel

In this talk we consider auto-equivalences of the bounded derived category $D(X)$ of coherent sheaves on a smooth projective complex variety X . By a result of Orlov, any such auto-equivalence induces an (ungraded) automorphism of the singular cohomology $H(X, \mathbb{Q})$. If X is a K3 surface, then work of Mukai, Orlov, Huybrechts, Macr and Stellari completely describes the image of the map $\rho_X : \text{Aut } D(X) \rightarrow \text{Aut}(H(X, \mathbb{Q}))$. We will study the image of ρ_X for higher-dimensional hyperkähler varieties. An important tool is a certain Lie algebra acting on $H(X, \mathbb{Q})$, introduced by Verbitsky, Looijenga and Lunts. We show that this Lie algebra is a derived invariant, and use this to study the image of ρ_X .

Thursday, March 5, 2020 01:30pm - 03:30pm

Heinzel Seminar Room / Office Bldg West (I21.EG.101)

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
