

Institute colloquium

The brain as a central regulator of immunity

Asya Rolls

Technion - Israel Institute of Technology

Host: Gaia Novarino

Thoughts and emotions can impact physiology. This connection is evident by the emergence of disease following stress or recovery in response to placebo treatment. Nevertheless, this fundamental aspect of physiology remains largely unexplored. By combining state of the art tools in neuroscience and in immunology we aim to uncover how specific brain activity affects the immune system and the organism's response to cancer. In this talk, I will focus on the brain's involvement in regulating the peripheral immune responses and share our new findings on how the immune system is perceived and represented in the brain.

Monday, March 1, 2021 04:00pm - 05:00pm

Online

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
