

Seminar/Talk

Moderate deviations and the space time geometry in integrable planar last passage percolation

Riddhipratim Basu

ICTS-TIFR

Host: M. Beiglböck, N. Berestycki, L. Erdős, J. Maas, F. Toninelli

The connection between the geometry of geodesics and moderate deviation estimates in planar stochastic growth models like first and last passage percolation is well-known. In this talk I shall discuss, with several examples, how deviation estimates with varying precisions can be used to answer various questions about geodesics and the large scale geometry of the underlying space-time landscape in the context of the exactly solvable model of exponential last passage percolation.

Wednesday, May 11, 2022 04:45pm - 05:45pm

Online via Zoom

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station. Please find a schedule of the ISTA Shuttle on our webpage: <https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
