Ergodicity breaking in flat-band lattices

Eulàlia Nicolau Jiménez

Universitat Autònoma de Barcelona

Host: Maksym Serbyn

Interacting particles in lattices with single-particle flat bands, which are composed of compact localized states (CLSs), can break ergodicity either strongly or weakly. In this talk, I will discuss two mechanisms, local Hilbert space fragmentation and highly-excited non-thermal eigenstates. First, I will discuss Bose-Hubbard models in a family of diamond necklace lattices where CLSs occupy the up and down sites of each diamond. By performing an appropriate basis rotation, the fragmentation of the many-boson Hilbert space becomes apparent in the adjacency graph of the Hamiltonian. The models present a conserved quantity related to the occupation of the CLSs that uniquely identifies the different sub-sectors of the Hilbert space. Due to the fragmentation of the Hilbert space, the distribution of entanglement entropies of the system presents a nested-dome structure. We will find weak thermalization through sub-sector-restricted entanglement evolution and a wide range of entanglement entropy scalings from area-law to logarithmic growth. We will characterize the system in depth, demonstrating that the fragmentation is quantum, local, and strong. Next, I will discuss the generalization of this mechanism to other models with single-particle flat bands. In particular, we will discuss the conditions that the flat-band lattices must fulfill in order to host local Hilbert space fragmentation. Finally, for lattices that do not satisfy these conditions, I will explore the generation of an arbitrary number of non-thermal eigenstates through the $2^{\sqrt{n}}$ versions of each model.

Tuesday, February 21, 2023 11:00am - 12:00pm

Big Seminar Room B (big) 63 seats (I23.EG.102)

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
