The density of polynomials of degree n over \mathbb{Z}_p that have exactly r roots in \mathbb{Q}_p

Stevan Gajovic

MPIM Bonn

Host: Tim Browning

Let f be a random polynomial in $\mathbb{Z}_p[x]$ of degree n . We determine the density of such polynomials f having exactly r roots in \mathbb{Q}_p . We also determine the expected number of roots of monic polynomials f in $\mathbb{Z}_p[x]$ of degree n , and, more generally, the expected number of sets of exactly d elements consisting of roots of such f . We show that these densities are rational functions in p and discuss the remarkable symmetry phenomenon that occurs and some asymptotic results. This is joint work with Manjul Bhargava, John Cremona, and Tom Fisher.

Thursday, April 13, 2023 01:00pm - 03:00pm

Heinzel Seminar Room (I21.EG.101), Office Building West, ISTA

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
