

Colloquium

Why are parasites so interesting?

Paul Schmid-Hempel

ETH Zurich

Host:

The role of parasitism in natural population has become re-considered in the light of evolutionary thinking for barely more than two decades. A priori principles have led to the formulation of new concepts that are intensively studied in the rapidly increasing field of evolutionary parasitology. In an insect-trypanosome model system, our lab has studied some of those questions, including issues relating to the costs of host defence or parasite strategies of diversification. New issues have recently arisen such as, for example, the presence of additional players in the host-parasite interaction.

Monday, October 3, 2011 04:45pm - 05:45pm

Raiffeisen Lecture Hall, Central Building

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station. Please find a schedule of the ISTA Shuttle on our webpage: <https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
