

Seminar/Talk

# Zigzag strategy for Wigner matrices

**Joscha Henheik**

ISTA

Host: Laszlo Erdős, Jan Maas

Over the past years, so called multi-resolvent local laws (= strong concentration estimates for alternating products of random resolvents and deterministic matrices) emerged as a powerful tool for tackling several questions in random matrix theory. In this talk, we will explain a novel dynamical method, the Zigzag strategy, for proving these estimates in the simplest case of Wigner matrices. The key idea behind the Zigzag strategy is a tandem of the characteristic flow method and a self-consistent Green function comparison (GFT) argument. Joint work with Giorgio Cipolloni and Laszlo Erds.

**Monday, March 25, 2024 05:00pm - 06:00pm**

Central Bldg / O1 / Mondi 2a (I01.O1.008)

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
