

Seminar/Talk

Beyond Structural Support: Skin Fibroblasts as Dynamic Regulators of Tissue and Disease

Beate Lichtenberger

Medical University of Vienna

Host: Florian Schur

Skin fibroblasts are central organizers of tissue architecture, providing the structural framework of the skin while actively regulating its development, homeostasis, and repair. Far from being a uniform cell population, fibroblasts comprise diverse subtypes with distinct spatial identities, functional programs, and interactions with epithelial, immune, and vascular cells. In this talk, I will discuss how fibroblast diversity shapes skin structure and physiology, and how altered fibroblast states drive pathological processes such as fibrosis and cancer. These findings position fibroblasts as dynamic regulators of tissue function in both health and disease.

Thursday, April 23, 2026 11:00am - 12:00pm

TBA

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
