

Seminar/Talk

On convex bodies and representation theory

Karoly Boroczky

Rényi Institute and CEU, Budapest

Host: Tamas Hausel

The notion of "valuations" on convex bodies in the Euclidean space originates from Dehn's solution of Hilbert's problem of equidissectability of polytopes of equal volume. Typical examples are volume or the number of lattice points inside, and in general, the interesting question is to understand the ones intertwining some classical group. We discuss relations of this notion to representation theory and toric varieties.

Thursday, November 23, 2017 01:00pm - 03:00pm

Big Seminar room Ground floor / Office Bldg West (I21.EG.101)

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
